

TECHNICAL DATA SHEET

SALMONELLA ENRICHMENT DOUBLE-STRENGTH BUFFERED

ENRICHMENT FOR SALMONELLA IN ACID PRODUCTS

1 INTENDED USE

Salmonella Enrichment double-strength buffered is a special formulation of Double-strength Buffered Peptone Water that has been created and controlled for optimal detection of *Salmonella* in food products and feed with an acid pH (lower than 4,5).

The *Salmonella* Enrichment double-strength buffered complies with NF EN ISO 6579-1 standard (Horizontal method for the detection, enumeration and serotyping of *Salmonella* spp.). This medium complies also with the NF EN ISO 6887-1 (General rules for the preparation of the initial suspension and decimal dilutions) and with the NF EN ISO 6887-4 standard (Specific rules for the preparation of miscellaneous products). *Salmonella* Enrichment double-strength can be used as Double-strength Buffered Peptone Water in required methods.

Salmonella Enrichment double-strength buffered has been specially formulated for the validated methods IRIS *Salmonella*[®] and SESAME *Salmonella* TEST[®] and can be also used as Double-strength Buffered Peptone Water in all required methods.

2 PRINCIPLES

The peptide composition and osmotic balance of *Salmonella* Enrichment double-strength buffered medium have been optimized to allow an exceptional resuscitation level of *Salmonella* strains.

The high strength of the buffer ingredients maintains a neutral pH at 7.0 ± 0.5 for the preparation of suspension of acidic products.

3 TYPICAL COMPOSITION

The composition can be adjusted in order to obtain optimal performance.

The *Salmonella* Enrichment double-strength buffered formulation conforms to that of double-strength buffered peptone water.

For 1 liter of *Salmonella* Enrichment double-strength buffered :

- Peptone	10,0 g
- Sodium chloride	5,0 g
- Disodium phosphate, anhydrous	7,12 g
- Monopotassium phosphate	3,0 g

pH if the ready-to-use media at 25 °C : $7,0 \pm 0,2$.

4 PREPARATION

- Dissolve 25,1 g of dehydrated media (BK225) in 1 liter of distilled or demineralized water.
- Stir slowly until complete dissolution.
- Dispense into tubes or vials.
- Sterilize in an autoclave at 121 °C for 15 minutes.
- Cool to room temperature.

✓ Reconstitution :
25,1 g/L

✓ Sterilization :
15 min at 121 °C

5 INSTRUCTIONS FOR USE

- Introduce aseptically 25 g of the sample to be tested into 225 mL ready-to-use *Salmonella* Enrichment double-strength buffered in order to achieve a 1:10 dilution.
- or
- Introduce aseptically X g of the sample to be tested into 9 X mL ready-to-use *Salmonella* Enrichment double-strength buffered in order to respect the 1:10 dilution ratio of 1 part sample + 9 parts of diluent mL.
- Mix well.
- Incubate at temperatures and for the periods required by the analytical protocol chosen.

6 QUALITY CONTROL

Dehydrated media : cream-white powder, free-flowing and homogeneous.

Prepared media : amber solution, limpid, may present a slight precipitate after prolonged storage.

Typical culture response (NF EN ISO 11133) :

Microorganisms	Growth
⁽¹⁾ <i>Salmonella</i> Typhimurium	WDCM 00031
⁽¹⁾ <i>Salmonella</i> Enteritidis	WDCM 00030
⁽¹⁾ <i>Escherichia coli</i>	WDCM 00012
⁽²⁾ <i>Listeria monocytogenes</i> 4b	WDCM 00021
⁽²⁾ <i>Listeria monocytogenes</i> ½a	WDCM 00109
⁽³⁾ <i>Escherichia coli</i>	WDCM 00012
⁽³⁾ <i>Staphylococcus aureus</i>	WDCM 00034

⁽¹⁾ After 18 hours of incubation at 37 °C (inoculum $\leq 10^2$ microorganisms)

⁽²⁾ After 60 minutes of incubation at 20 °C

⁽³⁾ After 45-60 minutes of incubation at 20-25 °C

7 STORAGE / SHELF LIFE

Dehydrated media : 2-30 °C.

Ready-to-use media in flexible bags, in vials : 2-25 °C.

The expiration dates are indicated on the labels.

8 PACKAGING

Dehydrated media :

500 g vial.....BK225HA
5 kg drum.....BK225GC

Ready-to-use media :

2 x 5 L flexible bags BM20008
10 vials of 225 mL..... BM20108
